

U.S.S.N. 10/767,027; Attorney Docket No. CET-026431CIP
Response to Non-Final Office Action mailed 3.15.2007

REMARKS

The Office Action has imposed a restriction requirement, alleging the claims include two distinct invention. Applicants hereby elect Group I, directed to the low resistance fuse (claims 1-14 and 26-38) for examination with traverse.

Applicants submit that all pending claims should be examined. As presently claimed, the method of claim 15 includes, *inter alia*, the step of "forming a fuse element layer having a fusible link extending between the first and second contact pads." The process of making a laminated resistor or laminated capacitor does not include this step as neither the resistor nor the capacitor includes a fusible link. Dependent claims 16-25 similarly each require this step. Thus, it is respectfully submitted that the process as claimed cannot be used to make another and materially different product.

With respect to the assertion that the product can be made by an alternative process, it is respectfully submitted that a full search of the apparatus claims will encompass methods of manufacture. Thus, contrary to what is stated in the Office Action, examination of all claims would not impose a serious burden on the Examiner.

Reconsideration and withdrawal of the restriction requirement is respectfully requested.

Election of Species

The Office Action also requires an election of species for examination. Applicants hereby elect Species I (corresponding to Figures 1-16) for examination.
